19. Now, I would like to read you two statements about mountaintop removal mining... [ROTATE]

_(Some/Other) people say that coal is an important part of America's economy and national security, and killing jobs is the wrong thing to do in this recession. Nearly half of all electricity produced in the U.S. is from coal, and increasing coal mining and using the most efficient methods frees America from our dependence on foreign oil, keeps energy costs low, grows jobs and the local economy.

_(Some/Other) believe mountaintop removal is bad for the economy and the environment and is causing ongoing harm to nearby communities, including increasing the number of birth defects and other serious health conditions. Mountaintop removal replaces workers with machines and explosives. It has filled nearly 2,000 miles of Appalachian streams with billions of tons of mining waste, killing wildlife and destroying forests.

Sometimes over the course of a survey like this people change their minds. Do you favor or oppose mountaintop removal mining or are you unsure?

Respondents who do not oppose mountaintop removal mining initially who, in the last two years, have gone or have had an immediate family member go hunting, fishing, or both.
- **Don't Oppose Mountaintop Removal Mining / No Opinion/Never Heard.** Respondents who do not oppose mountaintop removal mining initially who have no opinion on or have never heard of mountaintop removal mining.
- **Don't Oppose Mountaintop Removal Mining / Mountaintop Removal Mining Unfavorable.** Respondents who do not oppose mountaintop removal mining initially who have a somewhat or very unfavorable impression of mountaintop removal mining.
- **Don't Oppose Mountaintop Removal Mining / State Environment Worse.** Respondents who do not oppose mountaintop removal mining initially who think the quality of the environment in their state has gotten worse.

SURVEY METHODOLOGY

Lake Research Partners designed and administered this survey that was conducted by telephone using professional interviewers. The survey reached a total of 1,315 likely General Election voters in Kentucky, West Virginia, Tennessee, and Virginia, including oversamples of 150 likely voters in Kentucky and 150 likely voters in West Virginia. The survey was conducted July 25th through July 31st, 2011. The margin of error for this poll is +/- 2.7%.

Telephone numbers for the sample were generated from a file of registered voters. The sample was stratified geographically to reflect the expected turnout of voters in the 2012 General Election. The data were weighted slightly by gender, age, education, party identification, and region.

In interpreting survey results, all sample surveys are subject to possible sampling error – that is, the results of a survey may differ from those that would be obtained if the entire population were interviewed. The size of the sampling error depends upon both the total number of respondents in the survey and the percentage distribution of responses to a particular question. For example, if a response to a given question which all respondents answered was 50%, we could be 95% confident that the true percentage would fall within plus or minus 2.7% of this percentage, or between 47.3% and 52.7%. The table below represents the estimated sampling error for different percentage distributions of responses. Of course, the sampling error is greater for subgroups.

Sampling Error by Percentage (95% confidence level)
